

## Handling text in CSS

=====

In CSS we have several properties to deal with text content like **color**, **alignment**, **decoration** etc. The most common text properties are:

1. **color**
2. **text-align**
3. **text-decoration**
4. **text-transform**
5. **text-indent**
6. **line-height**
7. **letter-spacing**
8. **word-spacing**

1. **color** : Allows us to set color of the text. Possible ways are:
  - a. Using color name
  - b. Using color hex value
  - c. Using rgb() or rgba()

### 2. text-align

=====

1. Set the alignment of the text
2. There are 4 possible values for **text-align** and they are: **left**, **right**, **center** and **justify**

### What is justify?

=====

The value justify makes our text appear like news paper text i.e. it leaves equal margin on left and right of each row.

### 3. text-decoration

=====

1. This property allows us to set or remove decoration on text.
2. It has 4 possible values which are:

- a. **underline**
- b. **overline**
- c. **line-through**
- d. **none**

#### 4. text-indent

=====

1. This property set the indentation of 1st line of text.
2. This is done by inserting a blank space before the 1st word.
3. Possible values can be in %, px or em.

#### 5. text-transform

=====

1. This property allows us to set cases for the text.
2. Possible values are **uppercase**, **lowercase**, **capitalize**

#### 6. letter-spacing

=====

1. This property allows us to set extra spacing between two letters.
2. It values can be in px or em and even negative.

#### 7. line-height

=====

1. This property allows us to control vertical b/w two lines.
2. By default this gape is 1.2.
3. Its possible values are : %, **px**, **em** or unit less number.
