

Changing the default date

=====

To do this we need to set the value attribute but we must assign it the date in the pattern "yyyy-mm-dd"

Example:

=====

```
<input type="date" value="2005-02-01" id="mybdate" name="birthday" />
```

Will set the default date to
1st Feb-2005

Setting min and max dates

=====

HTML allows us to limit the date selection done by the user.

To do this we have to use 2 attributes called min and max.

However the date we assign must be of the format "yyyy-mm-dd".

All dates which fall in the given min and max range will be selectable while others are disabled

Example:

=====

```
<input type="date" id="startdate" min="2020-09-01" max="2021-01-01" />
```

Will allow min
date as 1st-Sep-2020

Will
allow max
date as 1st-Jan-2021

Changing the default date in datetime-local

=====

To do this we need to set the value attribute but we must assign it the date-time in the pattern "yyyy-mm-ddTh:mm"

Example:

=====

```
<input type="datetime-local" value="2023-05-29T15:00" id="mybdate"
name="birthday" />
```

It set the default date and time to 29th May-2023 at 3:00 PM
