

6. The <meta> Tag:

=====

1. It is also child tag of head tag

2. We use it to display or inform some details about our web page to the browser or the search engine.

3. The general syntax of meta tag is :

`<meta name="....." content="....."/>`

Example:

`<meta name="Keywords" content="HTML, Python, CSS, SQL">`

*Tells
google about
content of
web page*

A handwritten note in cursive script that reads "Tells google about content of web page". A curved arrow originates from the word "Tells" and points towards the "content" attribute in the meta tag example below.
