Using Heading Tags
=================
1. We use heading tags to display text in bold and different font size than normal text.

2. Heading alone supports 6 tags: <h1> to <h6>

3. Heading tags have following font sizes:

   h1 uses 32px font size + bold
   h2 uses 24px font size + bold
   h3 uses 18px font size + bold
   h4 uses 16 px font size + bold
   h5 uses 13 px font size + bold
   h6 uses 10 px font size + bold

4. Just like <p> tag , heading tags also support align attribute

How do we add comments in HTML ?
==========================
1. Like any other programming lang , HTML also supports coments. Comments are text which is not displayed by the browser when the page runs but we can use them to let other developers know the logic of our page

 2. Syntax:

   <!-- text -->

Formatting Tags In HTML
==================
1. Formatting tags are those tags which automatically have some default formatting into them by the browser.

Following are some popular formatting tags:

A. <b> Used for converting text into bold

B. <strong> Used for converting text into bold

`<b>`	`<strong>`
1. makes the text bold	1 makes the text bold
2. Available from original version	2. Made available from HTML 5
3. Used for only showing text in dark	3. Used for showing emphasized text

C. `<i>` Used for converting text into *italics*

D. `<em>` Used for converting text into *italics*

E. `<hr>` : Used for generating a horizontal line

Syntax:
======
`<hr size=" " width=" " color=" " noshade  align=" " />`
